Hamer

The first use of hammers arguably dates back to 2.6 million BC when stones were used to break and shape stone, bone and wood. This table lamp is able to shape a room by creating a composition in space and light. Hamer has an architectural appearance making the design true to the aVs esthetic. The base is made of Belgian bluestone. The lampshade is made of silk. Both materials have beautiful details. The light source is PL and energy efficient.
